

# OIL PANS FOR ENGINES AND AUTOMATIC TRANSMISSION

**metzger**   
**Autoteile**

## **New at METZGER:**

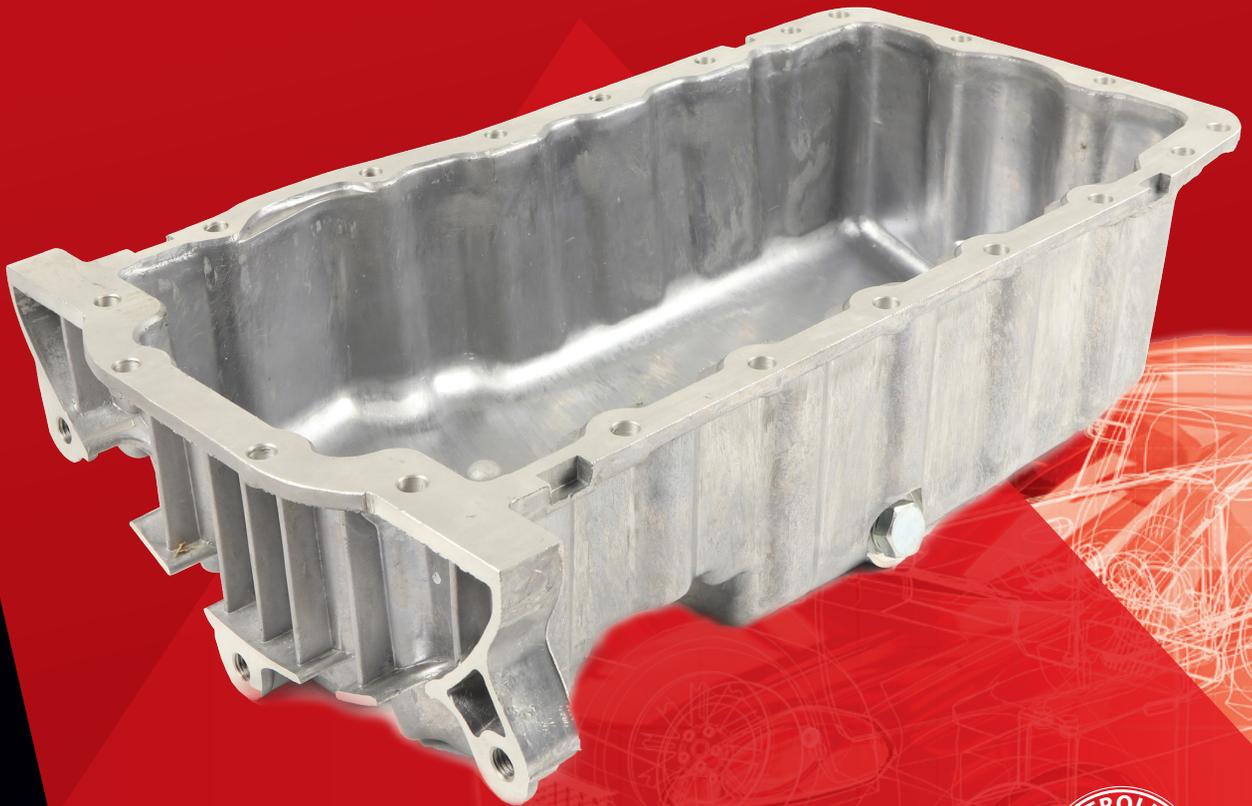

The oil pan is a component of engine or transmission lubrication in motor vehicles and is also referred to as the oil sump.

The oil sump contains the oil required for lubrication, which is pumped to the engine by the oil pump, which is sucked in and transported through the oil filter into the oil ducts. From the lubrication points the oil runs back into the oil sump.

- **Now available in the Metzger product range**
- **Tested safety and quality**
- **Immediately available**

Leaks must be dealt with quickly, as leaking oil can pose a hazard to road traffic. Even small quantities of oil can pollute large quantities of groundwater. If groundwater is polluted, penalties may be high in some cases.

**METZGER OIL SUMPS:  
BEST QUALITY FOR MAXIMUM SAFETY**
